

granat-site-indigo — Reviewer Quickstart

granat-site-indigo — Reviewer Quickstart

⚠ **OUT OF SCOPE for Phase 1 independent code review.** This repository is a **Cone Red goodwill artefact**, delivered to the Customer as-is at the close of Phase 1. It is **not** one of the two in-scope repositories. Master review guide: [granat-world/GRANAT/REVIEW_GUIDE.md](https://granat-world.com/GRANAT/REVIEW_GUIDE.md).

This quickstart is provided so that a curious reviewer can run the project locally if they want — not because review is expected.

1. What this repository is

A multi-section partner-facing narrative site (12 sections plus a combined single page) with an embedded voice-to-choir demo, in the **periwinkle-indigo** visual direction (working name “CD”), aligned to the existing Granat Telegram Mini App palette. Sibling of granat-site-wine (same content, different palette). Palette: deep indigo-purple #1A1043 ground · granat-red #C5403F CTAs · periwinkle #8FA3E8 accents.

2. Requirements

Tool	Version
Node.js	≥ 18 (LTS)
npm	≥ 10
Browser	any modern

Time to running: ~1–2 minutes

3. Clone and run

```
git clone https://github.com/granat-world/granat-site-indigo.git
cd granat-site-indigo
cp .env.example .env
# Optional: set GRANAT_API_KEY in .env if you want the Section 7 voice
# demo to call the upstream voice API live.
npm install
npm run dev
# Open http://localhost:3000
```

Same server pattern as the wine variant: Express serves static + proxies the voice API.

4. What to look at

- **public/index.html** — combined single-page (12 sections embedded)
- **public/{Hero, Challenge, Team, Philosophy, Architecture, How It Works, Roadmap, Social, Economy, Invitation, CTA}.html** — individual sections
- **server.js** — Express static + voice-API proxy + rate limiting

5. Stack overview

- Node.js + Express
- express-rate-limit
- multer
- Static multi-section site in public/
